Is ForeseeHome® right for you?

For patients:
Review the list below and check all that apply. Then print out all of the pages and bring them with you to your next eye appointment. Use the list to talk with your eye doctor about the best way to protect your eyes from wet age-related macular degeneration (AMD).

☐ Have you been told you have age-related changes in the back of your eye or been diagnosed with AMD, also called dry AMD?

☐ Are you being treated for dry AMD?

☐ Do you already have wet AMD in one eye?

☐ Do you want to know about additional things you can do to preserve your vision for the future?

If you said yes to any of the above, talk to your eye doctor to see if ForeseeHome is right for you.

Call Notal Vision at 1-888-910-2020, Monday–Friday, 8 AM to 8 PM EST, for any questions you may have about ForeseeHome (dial “0” for a representative)
For Eye Care Professionals

**ForeseeHome** is a simple, at-home monitoring program that alerts you if potential wet AMD progression is detected

Detect wet AMD earlier with ForeseeHome as part of a home detection program¹

![Graph]

**Maintenance of functional (≥20/40) vision with ForeseeHome at time of wet AMD diagnosis**¹

- **Standard care (routine visits + patient-reported changes)** (n=18)
  - 62%
- **ForeseeHome + standard care (PP2)** (n=29)
  - 94%

*P = .003*

> With ForeseeHome, 94% of patients who progressed to wet AMD retained functional vision (≥20/40) vs only 62% of patients using standard detection methods alone¹

The HOME Study used the ETDRS chart to measure the number of letters for visual acuity. The Snellen equivalent for visual acuity is presented here.

**Study design:** An unmasked, controlled, randomized clinical trial of 1520 participants 53 to 90 years of age with intermediate AMD at high risk of CNV. The study compared home monitoring with ForeseeHome plus standard care vs standard care alone to determine if the addition of the home monitoring device improved visual acuity at the time of CNV detection.¹

See next page >
**ForeseeHome is appropriate for the patients you see every day**

ForeseeHome is for intermediate dry AMD patients at risk of developing wet AMD\(^2\)

<table>
<thead>
<tr>
<th>Common intermediate dry AMD patient types</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intermediate dry AMD with 1 large drusen (≥125 µm)</td>
</tr>
</tbody>
</table>

**Patients must have:**

<table>
<thead>
<tr>
<th>OD (right eye)</th>
<th>OS (left eye)</th>
<th>H 35.31 3 2 (dry intermediate, bilateral)</th>
</tr>
</thead>
<tbody>
<tr>
<td>H 35.31 1 2 (dry intermediate, right eye)</td>
<td>H 35.31 2 2 (dry intermediate, left eye)</td>
<td>BCVA 20/60 or better</td>
</tr>
<tr>
<td>BCVA 20/60 or better</td>
<td>BCVA 20/60 or better</td>
<td></td>
</tr>
</tbody>
</table>

BCVA=best corrected visual acuity; GA=geographic atrophy.

**New offices submit their clinic information on a 1-page contact sheet supplied by the Notal Vision representative or at [www.foreseehome.com/HCP](http://www.foreseehome.com/HCP).**

To order ForeseeHome for your patients, fill out a ForeseeHome order form and email to adminassist@notalvision.com or fax to 1-888-341-9400, Monday–Friday, 8 AM to 8 PM EST; Notal Vision takes it from there.

You can also call Notal Vision at 1-888-910-2020, Monday–Friday, 8 AM to 8 PM EST to get your office started.
**FDA Indication for Use**

The ForeseeHome is intended for use in the detection and characterization of central and paracentral metamorphopsia (visual distortion) in patients with age-related macular degeneration, as an aid in monitoring progression of disease factors causing metamorphopsia including but not limited to choroidal neovascularization (CNV). It is intended to be used at home for patients with stable fixation.

The ForeseeHome AMD Monitoring Program is prescription use only and is intended to be used in addition to regular eye exams.

ForeseeHome AMD Monitoring Program is covered by Medicare, subject to its coverage requirements for the test, to assess patients with dry AMD who are at risk of developing wet AMD.
